

Grow your own mould

Experiments:

To examine mould.

Materials:

You will need:

- 1 plastic zip-lock bag,
- water,
- bread.

Method:

1. Moisten the bread.
2. Place the bread into the zip-lock bag.
3. Record and observe what happens to the bread in a week.

Result:

Mould grew all over the bread.

Find out more!

What is mould? Mould is a fungus. A fungus is a type of plant that does produce seeds. Instead, it releases tiny specks called spores into the air. When the spores land they grow into new fungi.
